

Cemetery Map Notes

Sketch maps of the project cemeteries are included in this appendix. The cemetery sketch maps provide information on the location of individual graves. The graves are marked with a number that corresponds to an individual who is listed in the database. For small cemeteries, the cemetery map may appear on one map. In larger cemeteries, an orientation map with cemetery sections is provided. Detailed maps of each cemetery section follows.

Grave numbers are listed in the database field "Grave Number". Small cemeteries will have a simple grave number such as 7, 25 etc. For larger cemeteries, the grave number will be a combination of section number followed by the grave number for that section. For example, grave number 22-10 indicates that the individual's grave is number 10 in section 22 of the cemetery. Where possible, 'Unknown' graves are included on the cemetery maps in the hopes that future research, grave proximity, or other information will help to identify these individuals.
